Profile

IT Transformation Lead and Independent IT Management Consultant

Highly Experienced Systems Integrator: Bringing extensive experience as a solution architect and technical project manager, certified by Accenture and Avanade, with delivery experience from over 50 ICT projects. These projects have ranged from individual applications to large-scale ERP renewals in international multi-vendor environments.

Result-Oriented ICT Professional: Transforming business requirements into effective architectures, roadmaps, and delivery plans while meticulously managing costs and risks. Proficiency in Agile and hybrid delivery models ensures projects align perfectly with organizational needs, workflows, and tools. Teams will be coached to be more effective, driving success throughout initiatives.

Degree of Education

Master of Economics. University of Jyväskylä. Master: Computer Science. Minor: Accounting.

- Microsoft Certified Software Developer (MCSD)

Education

- University of Jyväskylä, Master of Sciences in Computer Science and Economics

Relevant project history

2019 - Current **Jukola Consulting Oy** • Contractor for IT Management

An environmental company initiated a large transformation program involving 150 people to migrate to a new ERP and move integrations to the cloud. For 2,5 years, I worked as a technical PM overseeing two projects: infrastructure setup and integration development. Additionally, I got promoted to work in PMO, where I had a key role in developing the project portfolio management using “Microsoft CRP” hybrid methodology, and customizing Jira for it. Coached business owners and teams to use the method and tools effectively. (*Technologies: D365 FO • DealHub • CRM • MDM • JSON • Azure • Logic Apps • Functions • Event Hub • Jira • Confluence with Draw.io • ServiceNow • Excel & Power Pivot & VBA*)

A privately owned business group, consisting of multiple food-producing factories in northern and central Europe, enabled a new competency: leading by data and business intelligence. I worked in multiple roles: Primary responsibility was overseeing the development of a modern data platform utilizing event-based data pipelines for near real-time analytics. When analysing end-to-end data pipelines and writing BI stories, my solution architect experience was crucial. Planned and proposed a new Data as a Service (DaaS) organization, responsible for the new platform and all data and integration development. I also worked for CIO to help with Agile transformation; Developed IT portfolio view using Azure DevOps Boards. (*Snowflake • Azure Event Hub • Power BI • MES • IIoT • Azure DevOps*)

2010 – 2019 **Avanade Finland Oy** • Solutions Architect | Technical Project Manager | DevOps Advisor

At Avanade I worked as a certified Systems Integration Solution Architect (SISA) and as a technical project manager. In the role of a SISA I transformed business ideas and requirements into technical blueprints, epics, and backlogs, and created a concrete delivery plan for the envisioned solution. As a PM I did commit to delivering business IT solutions. The advantage of combining these two roles is a genuine understanding of project details, desired outcomes, constraints, and risks. I also worked as DevOps Advisor for Avanade’s international 100+ strong team of DevOps specialists. Agile Coaching and Agile Methods (*Microsoft technology stack • Azure • Azure DevOps • Microsoft Sharepoint • Microsoft SQL Server*)

2006 – 2010 **Soalution Ky** • Contractor for Software Architect and PM roles, Owner

Enterprise-wide integrations, implementing Service Oriented Architectures. (*BizTalk • C# • Microsoft SQL • XML • XMLSpy*)

2001 – 2006 **Talent Partners / Tek Laboratories Ltd** • Systems Architect / CTO

As CTO of Tek Laboratories Ltd, I had a key role in establishin a near-shore software factory in St Peterburg Russia. And worked onshore as a tech lead and project manager for Finnish customers. (*.NET • Java • PostgreSQL • Windows CE • CreME*)

1993 - 2001 **Accenture** • Systems Integration Consultant

My Baptism of fire into the IT consulting world: From a programmer to a manager doing programming, testing, design, estimation, team leading, application architecture design, integrations, and some solution architecting. (*Lots of IT technologies used*)
